AB In the manufacture of silicate foam from soluble alkali metal silicates, Al compds. or P compds. 5-60 weight%, based on the silicates, are added to raw mixts. to improve the heat resistance of the foams. Thus, a paste containing water glass [1344-09-8] 100, Al(OH)3 [21645-51-2] 20, mineral fiber 10, and diatomite 10 weight parts was molded to a sheet form and foamed by microwave heating at 2450 MHz to obtain a water glass sheet (35 mm thick) having sp. gr. 0.3. When the sheet was heated at 1200°, the longitudinal shrinkage was 10%. In contrast, a sheet made without adding Al(OH)3 melted at 800°.
